

SMART Ideas[™]

concept-mapping software

“SMART Ideas software helps our teachers integrate technology into their classes and has blown our staff away by how easy it is to learn and implement.”

Sheri Gunville, Integrated Learning Consultant, Saskatchewan Rivers School Division #119, Prince Albert, Saskatchewan, Canada

Help students visualize abstract concepts and complex ideas with SMART Ideas concept-mapping software. It allows teachers to create dynamic and colorful maps with shapes and connectors, making lessons easier for students to understand and classroom work a lot more fun.

Make ideas and connections visual

Using SMART Ideas software, teachers and students can drag colorful shapes and connectors to create a concept map. Then they can enhance the map with curriculum-specific and interactive clip art that adds interest and helps make learning engaging and visual. They can also easily attach links to files and multimedia content for even more impact.

Optimized for use with SMART Board[™] interactive whiteboards, the concept maps teachers create become the focal point for interactive and highly engaging lessons. And because handwriting converts easily to text, notes written in digital ink can be quickly incorporated into maps.

Add levels of learning

SMART Ideas software lets teachers create multilevel maps that take students through concepts one level at a time for greater clarity. Teachers can easily switch between the diagram and outline views to demonstrate the connection between visual and written ideas. They can also use global view to show all map levels at once and presentation view to remove toolbars for ease of viewing.

In class, students can use SMART Ideas to build their own concept maps, working on their own or together in collaborative brainstorming exercises. Outside the classroom, SMART Ideas software becomes a flexible planning and presentation tool. Teachers can use multilevel maps to plan semesters and lessons with all the supporting documents attached.

- 1 Gallery – Organize groups of collections yourself
- 2 Hyperlink – Attach files to your document
- 3 Style Paint – Copy formatting from one object to another
- 4 Sticky symbols – Layer objects and move as one
- 5 Layout – Automatically select map format
- 6 Quick Create – Rapidly create a connected diagram
- 7 Presentation mode – Remove toolbars
- 8 Work space grid
- 9 Multiple views

Visually explore ideas

Style collections

Drag and drop ready-made symbols, basic and deluxe connectors, images and interactive clip art.

Visual effects

Change connector styles, and add patterns, images and shading to symbols.

Clip-art Gallery and cliplets

Use over 2,000 resizable pieces of clip art, organized by curriculum topic. Or use cliplets to tell time, measure angles and much more.

Multiple views

Switch between the Diagram view or the text-based Outline view to demonstrate the connection between visual and written ideas. Or show all map levels at once in the Global view.

Presentation mode

Automatically remove toolbars for ease of viewing.

Layout

Choose a layout style that will automatically organize diagrams.

Sticky symbols

Layer objects and move them together to easily categorize ideas.

Build on concepts

Multilevel diagrams

Add sublevels to symbols to create multilevel diagrams, and then export maps to create navigable websites.

Hyperlinks

Add links or attachments to files, websites and levels within diagrams. Link to multimedia files and play them within SMART Ideas software.

Quick Create

Create new, linked symbols with a single keystroke.

Collapse and expand levels

Collapse or expand tree diagrams, one branch at a time.

Legend creation

Easily create legends to emphasize meaning in symbols and their relationship to information.

Simple integration

Save in easy-to-share formats

Save concept maps as a Microsoft® Word documents, HTML files or image files, keeping all map levels intact.

Cross-platform compatibility

Open maps on both Microsoft Windows® and Mac OS X operating systems.

Integration with the SMART Board

interactive whiteboard

Use with a SMART Board interactive whiteboard for touch control, handwriting recognition and more.

System requirements

System requirements for Windows operating systems

- Pentium®-class computer
- 128 MB RAM
- Windows XP or Windows Vista® operating systems
- Available for use on a Tablet PC

System requirements for Mac OS operating systems (version 10.3 or later)

- Power Macintosh computer
- 128 MB RAM
- 20 MB of free hard disk space for minimum installation (102 MB for full installation with clip art collections)
