

SMART Response™ VE

interactive response system (beta)

SMART Response VE is a browser-based product that lets students respond to planned and spontaneous questions and quizzes from their Internet-enabled phones or devices.

Gain immediate insight into student understanding using mobile devices. SMART Response VE interactive response system is a browser-based product that works with your existing SMART Response system, enabling students to respond to planned and spontaneous questions and quizzes from their Internet-enabled phones or devices. SMART Response VE also integrates with SMART Notebook™ collaborative learning software, providing you with one application for creating lesson activities, delivering assessments and evaluating results.

Keep students engaged in lessons

SMART Response VE helps keep students interested, involved and participating in lessons by giving them a way to individually respond to teacher questions. Students can participate in classroom assessments using Internet-enabled mobile devices, and once a question is complete, they receive feedback instantly and confidentially. To complete assessments, students simply log in to the SMART Response VE website to receive and answer the questions you create.

Gauge student understanding

SMART Response VE enables you to deliver assessments, whether created in advance or asked spontaneously at any point during a lesson, to gauge students' comprehension. When students respond, their answers are automatically summarized in a pie chart or bar graph on a SMART Notebook page, so that you can take a closer look or add your own comments in digital ink.

Evaluate and manage student progress

With the Teacher Tools feature in SMART Response VE, you can create class lists and view and manage all student assessment data in one location. You can also use the built-in gradebook to record test scores, track performance, evaluate trends, create reports or export results to third-party gradebooks for further analysis.

A Manage data with Teacher Tools and the built-in gradebook

B Automatically summarize student responses into a pie chart or bar graph in SMART Notebook software

1 For use on Internet-enabled devices, including computers and smart phones

2 Question types – true or false, yes or no, multiple choice and multiple answer

Key features

Integration with SMART Notebook

Create dynamic questions and assessments by accessing SMART Response directly from within SMART Notebook software. With one touch you can deliver assessments on the SMART Board™ interactive whiteboard. You can also show assessment results on a SMART Notebook page and add comments in digital ink.

Mobile device-enabled

Students respond to assessments using Internet-enabled devices, such as computers, iPhone, iPod touch or iPad mobile digital devices, Blackberry® smartphone models, and phones on the Android™ mobile technology platform. To complete assessments, students simply log in to the SMART Response VE website to receive and answer the questions you have created.

Question variety

Ask different types of questions, including true or false, yes or no, multiple choice and multiple answer.

Import existing questions

Import questions from Microsoft® Word (Windows® only), a PDF (Mac only) and EXAMVIEW® (HTML). You can also download SMART Notebook lesson activities with SMART Response question sets from the SMART Exchange™ online community.

Lessons with integrated questions

Compile tests for formative and summative assessment, prepare quizzes or exams in advance and ask spontaneous questions to gauge students' comprehension at any point during a lesson.

Display test results immediately

Automatically summarize student responses into a pie chart or bar graph. You can also view assessment progress before all students have submitted final answers.

Anonymous mode

Allow your students to respond with complete confidentiality.

Teacher Tools

Create class lists or import existing class lists (.xls format), set up, conduct and manage tests and quizzes – all from one location.

Built-in gradebook

Use the built-in gradebook to track performance and record test results, which are automatically collected and saved.

Export assessment results

Export results in Microsoft Excel® format (.xls) or text format (.csv). Customize text files by choosing the fields required for the report, including question-level data.

Tagging

Tag student names and assessment questions with keywords to track specific characteristics that will help you measure and evaluate student performance.

System requirements

SMART Response VE is compatible with both Microsoft Windows and Mac operating systems. For full system requirements please visit smarttech.com/response.

Try the SMART Response VE beta

If you already own a SMART Response system, you can sign up to try the beta version of SMART Response VE at smarttech.com/response.
