

The New Bioveta a.s. Training Centre

Bioveta a.s., Ivanovice na Hané/Czech Republic

The SMART solutions are used for team meetings, brainstormings and also foreign language learning.

Bioveta a.s., a listed company based in Ivanovice na Hané, is the biggest manufacturer of veterinary, immunobiological and pharmaceutical products in the Czech Republic, specialising in supplying a wide range of high-quality animal-health products to vets and animal breeders.

In September 2010 a new training centre building was officially opened in the Bioveta complex. The new training centre is primarily used for training the company's employees to consolidate and improve their skills and qualifications. Bioveta's investments towards boosting the skills and qualifications of its employees is also helping to improve the quality of the production process for its veterinary products, and this is greatly bolstering the competitiveness of its products on the market in the Czech Republic and abroad. Not only does Bioveta have a new building to its name, jointly financed by the European Union fund via the "Entrepreneurship and Innovation" Operational Programme, but it has also successfully equipped the facility with state-of-the-art interactive teaching aids.

The opinion of the IT Engineer Jiří Vlk

"We decided to equip the new building with the latest equipment, usable across all departments. We put the main emphasis on quality, usefulness and ease of operation. Since much of our communication is with international pharmaceutical companies like Pfizer, we needed to install a video-conferencing system which would be compatible with theirs and would be on the same or a similar cutting-edge level. Along with the video-conferencing system, we also discussed whether to equip the training facility with a standard screen and projector or SMART Board® interactive whiteboards. We had a short demonstration from AV MEDIA on the latest trends in interactive learning and training and our minds were made up – we knew just what we had to install in the training facility. The centre has been up and running for a year now and we are making full use of two SMART Board interactive whiteboards for specialist training, team meetings, foreign-language learning, brainstorming, as a substitute for paper flipcharts and for operations meetings."

Challenge

Find a tool to ease the communication with international pharmaceutical companies and improve the skills and qualifications of the company's employees.

Solution

Bioveta uses the SMART solutions for specialist training, team meetings, foreign-language learning, brainstorming, as a substitute for paper flipcharts and for operations meetings.

Results

The company improves the quality of its production process for its veterinary products and this is greatly bolstering the competitiveness of its products on the market in the Czech Republic and abroad.
