- SMART Notebook™ collaborative learning software
- SMART Response™ interactive response system
- SMART Table® interactive learning center
- SMART Sync™ classroom management software
- SMART Audio™ classroom amplification system

Make learning accessible for all

SMART products offering auditory support

SMART solutions help teachers convey concepts both in verbal and nonverbal formats, enabling students who require auditory support to better understand materials and participate alongside their peers. And many commonly used assistive technologies can be paired with our products, so you can easily find the tools to personalize learning for every student. Below you'll find information on SMART products that offer assistance for students requiring auditory support.

SMART Notebook collaborative learning software

With SMART Notebook software, you can create multimedia lessons that give students numerous linguistic and nonlinguistic ways to connect with learning materials. SMART Notebook software can help you

- Use assistive technologies that have sound recording functionality
- Provide replays of instructions using SMART Recorder. The recording device also provides auditory support, giving students greater independence and responsibility for their learning.
- Incorporate assistive technologies, such as text-to-speech tools

SMART Response interactive response systems

SMART Response interactive response systems include powerful assessment software that helps you deliver formative and summative assessments using a variety of question types. Students answer questions using wireless remotes (or clickers), offering an alternate means of comprehending questions and expressing knowledge. With SMART Response, you can

- Add sounds to questions to clarify meaning
- Enable students to hear questions being read from their own computers using SMART Notebook*

    *Only in SMART Notebook 11, using the new recording feature

SMART Table interactive learning center

SMART Table provides a multitouch, multiuser experience that helps students approach materials in a variety of ways. Because SMART Table provides both auditory and visual feedback, it's highly inclusive. You can use SMART Table to

- Present information in linguistic and nonlinguistic formats so all students can understand
- Provide verbal instructions for activities
- Add audio to your lessons with the SMART Table Toolkit
- Pair assistive technologies, such as applications that enable teachers and students to record sounds and play them back

SMART Sync classroom management software

SMART Sync classroom management software connects your computer with those of your students, making it easy to deliver materials in a variety of formats. You can use SMART Sync to

- Deliver multimedia material directly to students' computers, so they can learn at their own screens using multiple senses
- Embed audio clips into activities so students can listen directly from their computers using headsets or other devices. They can also play back clips as often as they wish.

SMART Audio classroom amplification system

SMART Audio evenly distributes sound throughout the classroom. Its speakers, wireless microphone and amplifier help students hear the teacher or any multimedia content from anywhere in the classroom. For students with auditory requirements, SMART Audio plays a key role in making lesson materials accessible and comprehensible.
