

Work as one connected team, from anywhere.

What if there was an Ultra HD touch display that was also a simple whiteboard that enabled you to write on it through a device, from anywhere?

That's SMART kapp iQ™.
The interactive display reimaged.

All the simplicity
of a traditional
whiteboard.

All the power
of an Ultra HD
display.

All the freedom
of mobility and
remote sharing.

Read on to explore why SMART kapp iQ
is so much more than just an Ultra HD display

The SMART kapp iQ difference is outstanding.

Evolve ideas with a brilliant resolution display that lets you multi-way whiteboard and share in real-time, to and from any device.

Just walk up and get going

Simply plug in and get started—no IT integration is needed. Proximity Detection helps you make the most of meeting time by sensing the presence of users and automatically starting up your board—without complicated or lengthy start-up and login procedures.

Get ideas moving

Use the SMART kapp app to connect to the board via an NFC tag or QR code—and you're instantly ready to share whiteboard content.

See things differently

An Ultra HD resolution and glare-free LED brilliantly displays detailed content.

Inspire a brainstorm

Want to explore an idea further? Seamlessly switch from the display to a multi-way whiteboard and enable real-time collaboration. Interact naturally using finger, pen or palm recognition and identify contributions using red and black digital ink.

Connect remotely via the SMART kapp app

Expand meetings or lessons across offices and classrooms, and loop in remote participants, inviting up to 250 people to join any session with a simple URL link. Share whiteboard content back and forth between connected laptops, tablets, smartphones and the main display, saving screenshots as you go so you can edit content later.

Follow up quickly and professionally

Meeting's over? Simply save the content as a JPEG or PDF. Tidy up with post-session editing and enjoy flexible sharing via Evernote™, Google Drive™ or Dropbox™.

Safeguard data

Secure content with PIN code access and data deletion once you've disconnected from the display.

Why choose just any display when you can have so much more?
