

# SMART Audio™

## More hearing means more learning

The SMART Audio™ 400 classroom amplification system distributes sound evenly around the room. Teachers can speak at their normal volume. Students at the back of the room can hear just as well as students at the front. And when students can hear everything, they stay focused, engage in classroom discussions and perform better.

**SMART**

### Amplify learning

Student devices. Multimedia presentations. Teachers talking. Classrooms today are noisy and full of distractions. Students who hear lessons clearly stay focused and contribute more to classroom discussions.

### Teachers talk comfortably

With SMART Audio, teachers are able to speak at their natural volume without straining. The system picks up and amplifies teachers' voices, so all of the lesson information is heard in every corner of the classroom.

### Students speak up

Some students speak softly, especially when addressing the entire classroom. Giving students a hand-held microphone encourages participation. Students speak more confidently and thoughtfully.

## Audio systems designed for the classroom

SMART Audio systems are an ideal complement to a SMART Board and SMART Learning Suite software. The systems use wireless technology that works better in bright, open-plan classrooms than infrared devices. You won't have interference from existing technology.

#### RECEIVER

Designed to pick up only the microphones paired with it, the receiver translates audio signals into crystal clear instruction. It can be easily installed near a SMART Board in any learning space.

#### CEILING SPEAKERS

These speakers are made for classrooms with acoustic tile. Mounting speakers in the ceiling distributes multimedia and voice sound throughout the classroom evenly.

#### TEACHER MICROPHONE

Ideal for large spaces and classrooms with windows, the microphone is lightweight and comfortable, and lets teachers adjust their volume, student mic volume and auxiliary volume from anywhere.

#### WALL SPEAKERS

Wall-mounted speakers are excellent for multi-media presentations. Teachers can also rotate speakers to optimize sound in different areas of the classroom.

#### HANDHELD MICROPHONE

Students speak with more confidence when they're holding a microphone. This microphone picks up the quietest student voices and facilitates easier class participation.

#### SMART AUDIO BUNDLES

One receiver. One teacher microphone. Two or four speakers. Clear voice and multimedia sound for any learning environment or space — all for a great price.
